The web site for hotel Anita. Application is made in **PHP Laravel** framework and **jQuery**. My role in this project was project manager, lead engineer and lead programmer.

Preview

**Construction Supply Solution (CSS) - Adria Invest**

Nov 2017 – Present

Every construction company has one or more open construction sites and plenty of workers who has to be organized and kept busy. There comes the need for an application for ordering food, clothes, goods for each construction site individually, managing workers and creating teams, makes complete communication and organization tracked and documented. Application is developing in **PHP Laravel** and **jQuery**, reports in Jasper Report. My role in this project is project manager, sales manager, lead engineer and programmer.

**LOS - Hipotekarna bank (Logate d.o.o.)**

Aug 2016 – Present

LOS is an application for simple and quick cash loans approval analyse. It is used by the commercialist and analytics who don't have time to analyze each client individually, the application generates the loan proposal document in seconds. The document contain all reliable information

needed for approval on decision board. In that document user can see all clients previous loans, payment template, rating of a company in which client is working, loans in another banks etc. Application is made in **Java Spring** and **AngularJS** framework. My role in this project was project manager and lead backend programmer.

---

#### **Archive application - NLB Montenegro bank (Logate d.o.o.)**

Apr 2016 – Present

Archive application is an application which tracks the item (documents) that are stored. Items are usually important to the company so they have to be kept somewhere if the company needs one of them. Application is an enterprise solution so it has a lot of users and all users have their role in the application. Users can send, receive, destroy, mark etc. the items and all that actions are tracked by the app. Integration with the core of banking system is made so all the imports from the core are done automatically the possibility of human mistakes are reduced to minimum. Application is made in **Java Spring** and **AngularJS** framework. Reports are made in **Jasper Report** Framework. My role in this project is lead engineer and lead backend programmer.

---

#### **Hotel Bracera - Budva**

Mar 2016 – Apr 2016

The web site for hotel Bracera is actually an application which makes room booking and experience sharing more easier. Site is made to be beautiful and simple but also practical. Administrator can upload/delete photos, organize albums, edit rooms, make special offers, make blog post and allow/delete comments which are posted, user management, track messages from hotels customers.

Application is made in **PHP Laravel** framework and **jQuery**. My role in this project was project manager, lead engineer and lead programmer.

#### **Archive application - Societe Generale Montenegro bank (Logate d.o.o.)**

Sep 2015 – Feb 2016

Archive application is an application which tracks the item (documents) that are stored. Items are usually important to the company so they have to be kept somewhere if the company needs one of them. Application is an enterprise solution so it has a lot of users and all users have their role in the application. Users can send, receive, view etc. the items and all that actions are tracked by the app. Integration with the core of banking system is made so all the imports from the core are done automatically the possibility of human mistakes are reduced to minimum. Application is made in **Java Vaadin** framework. Reports are made in **Jasper Report** Framework. My role in this project was project manager, lead engineer and lead programmer.

---

#### **Archive application - Archive Knjaz (Logate d.o.o.)**

Mar 2013 – Feb 2014

Archive application is an application which tracks the item (documents) that are stored. Items are usually important to the company so they have to be kept somewhere if the company needs one of

them. Application is an enterprise solution so it has a lot of users and all users have their role in the application. Users can send, receive, view, destroy, mark etc. the items and all that actions are tracked by the app. When we say store the item, we mean it has been put, for example, on field 1, shelf 5, room 10, floor 2, building 1. Application generate notification to officer when and item is ready to be destroyed so space can be freed. Application is made in **Java GWT framework**. My role in this project is programmer in maintenance.
